

Excisional Biopsy

Cradles® Needle Localization Wire Protectors

Help prevent wire migration or movement during transport to surgery for more accurate excisional biopsies.

Cradles are professional clear covers that protect and stabilize the needle localization wire. Unlike bulky padding, Cradles conform to the patient's body to prevent wire movement during transport for greater patient comfort and more accurate excisional biopsies. The localization wire is visible at all times, making removal of Cradles in preparation for surgery safe and easy, with no guesswork or potential tugging of the wire.

Cradles®

REF 309 QTY 12/box

- 12" x 3" translucent cover with foam adhesive border
- disposable, clear covers for protecting and stabilizing the needle localization wire

Cradles®

- Clear, see-through
- Easy to apply and remove without catching wire
- Help prevent wire movement
