

QUICKVUE[®]+

Infectious Mononucleosis TEST

Test and Treat Today!

Announcing the return of QuickVue+ Infectious Mononucleosis, a rapid test for the detection of infectious mononucleosis IgM antibodies in whole blood, plasma and serum. IgM antibodies appear in early acute phase infection and disappear within 4 to 6 weeks.

QuickVue+ Infectious Mononucleosis has no age limitations and combines the simplicity of a rapid test with accurate results you can trust. The clearly distinguishable plus or minus readout and simple procedure makes it easy to run in your lab or office.

Rapid Diagnosis and Treatment

- Results in about 5 minutes.
- Test and treat in the same office visit.
- Reduce the spread of germs.

Easy to Use

- Self-contained Test Cassette.
- Easy-to-read plus/minus (+/-) readout.
- Use with multiple sample types.
- CLIA waived for whole blood.
- No age restrictions.

Accurate Detection

- IgM-specific test.
- Sensitivity: $\geq 99\%$: Specificity: $> 99\%$.
- $> 99\%$ agreement with slide hemagglutination and EIA.

Convenient Packaging

- Room temperature storage with up to 24-month shelf life from date of manufacture.
- Built-in Positive and Negative procedural controls ensure accuracy.
- Positive and Negative external controls provided.
